DataCollectionandPreprocessingPhase

Name	Akshaya Babaso Chavan
Project Title	Restaurant Recommendation System

DataQualityReportTemplate

Data Source	DataQuality Issue	Severity	ResolutionPlan
Dataset (Restaurant reviewsand metadata)	Missing values in fields like restaurantname,location,or ratings	Moderate	Perform data imputation using techniques like mean/mode for numeric values andmostfrequent value for categorical data. Alternatively, removerowswith critical missing fields.
Dataset (User reviews) Dataset (Timestampfield)	Duplicateuserreviewentries Inconsistentorincorrect timestamp format	Low Moderate	Removeduplicate records using drop_duplicates() in pandas or SQL DISTINCTqueries. Use datetime parsing libraries (e.g., pandas.to_datetime) to standardize all date/time fields.
Dataset (Restaurant metadata)	Inconsistent formats (e.g., locationwrittenindifferentways like "NY", "New York")	Moderate	Apply data standardization techniques, using stringfunctionsor regex patterns to unify the format.

Dataset (User preferenc es)	Sparsedataorinsufficientuser history	High	Implementfallback strategies such as popularity-basedor content-based recommendations when user data is lacking.
